

## COMMUNITY HEALTH

People interested in assisting individuals and communities live a healthier, happier life, choose Community Health as a major. Community Health Educators work with groups of people, usually in a community setting, promoting physically activity, protecting and preserving health. The Community Health Educator then works as a catalyst to assist the individual, or community, to modify and enhance lifestyles to promote health and prevent disease. Community Health educators are interested in developing community-based educational programs which promote healthy lifestyles that help prevent disease.

In preparation towards becoming a Community Health educator, a student will learn skills that will enable them to assist communities and individuals in achieving their goal of a healthy lifestyle and risk management reduction. These skills than become the “tools” to aid in the healthy lifestyle changing process. Skills taught include: assessing individual/community needs and assets; planning, implementing and administering health education programs; evaluating the effectiveness of health education programs; and facilitating/understanding group dynamics and individuals across the lifespan.

The curriculum is designed following the Society of Public Health Education and the American Association for Health Education Baccalaureate Programs “Recommendations for Community Health.” The criteria assures that graduates have the needed competencies to become certified Health Education Specialist’s (CHES). The Community Health program is designed to provide advanced areas of study dependent upon the individual’s unique needs and interests. One area of concentration should be selected from the following:

- Concentration I:** *American Humanics*: a specific certification for those interested in management of non-profit organizations;
- Concentration II:** *Health Behavior*: enhanced study of health focusing on factors influencing human behavior and the resultant health decision making practices; or
- Concentration III:** *Physical Activity*: for those individuals seeking expertise in fitness and wellness venues, program designed to comply for American College of Sports Medicine Health Fitness Instructor and National Strength and Conditioning Association guidelines.
